				Sheet number	
Echelle: 1 : 50				018	

The layout of the hot and cold water pipes shown along the partition walls is strictly schematic, designed to improve the readability of the plan.
In practice, the pipes must be routed through the basement or ceiling voids, properly insulated, and installed along the shortest possible path to retain maximum heat and optimize the system's efficiency.
This plumbing plan remains schematic; it is essential to have the network reviewed and approved by a licensed plumber and your contractor.

The various pool systems and networks will be defined in consultation with a professional and according to the owner's maintenance requirements.
